PROFESSIONAL SUMMARY

Computer Engineering student and Physics minor specializing in embedded systems and real-time telemetry for aerospace applications. Experienced in sensor integration, low-power system design, and cross-functional engineering through leadership roles and rocketry projects. Dedicated to transforming theoretical foundations into scalable engineering solutions.

EDUCATION

- Aydin Adnan Menderes University** Aydin, Turkey
B.S. in Computer Engineering (GPA: 3.1) *Expected Jun 2028*
 - Physics Minor Program (Commenced Sep 2025).

EXPERIENCE

- InfoCube IT Consulting** İzmir, Turkey
Volunteer Intern *Jun 2025 – Sep 2025*
 - Configured corporate network infrastructures and system architectures.
 - Integrated hardware components into existing network environments.
 - Supported system maintenance and troubleshooting processes to ensure maximum uptime.
- IEEE ADU Student Branch** Aydin, Turkey
General Secretary *Jun 2025 – Present*
 - Led planning and execution of large-scale technical events including UNIDES Project, Aydin Technology Summit, and IEEE Aegean Region Meeting.
 - Managed cross-team coordination, budgeting, and organizational communication.
 - Oversaw official documentation and executive board operations.
- Astralles Rocketry Team** Aydin, Turkey
Embedded Systems Developer *Aug 2024 – Mar 2025*
 - Designed and implemented low-power telemetry systems for high-altitude rockets under resource-constrained conditions.
 - Integrated multiple sensors using I2C and SPI protocols for real-time flight data acquisition.
 - Applied digital filtering techniques to improve data reliability and signal accuracy.
 - Conducted system integration and field tests to validate firmware compatibility with mechanical systems.

SKILLS

Programming: C, C++, Java, Python, JavaScript, HTML/CSS
Embedded Systems: ESP32, Arduino, Sensor Integration, Telemetry, I2C/SPI
Tools & Tech: Git, GitHub, React, Linux, Network Configuration
Languages: Turkish (Native), English (B2)

PROJECTS

- PrizmaVita** | *React, JavaScript, HTML/CSS*
 - Developed a responsive portfolio and blog platform using component-based architecture.
- ESP32 Digital Multimeter** | *Embedded C++*
 - Built a portable measurement device utilizing ADC for precise voltage and current acquisition.
- Smart Misting System** | *Arduino, IoT*
 - Designed an autonomous climate control system using sensor-driven decision mechanisms.
